BACKGROUND OF THE INVENTION

1. Field of the Invention

Page 1, between the first and second paragraphs:

2. Description of the Prior Art

Page 2, between the third and fourth paragraphs:

SUMMARY OF THE INVENTION

Page 2, fifth paragraph:

The invention achieves this object by means of the features of the main claim.

Page 5, between the second and third paragraphs:

BRIEF DESCRIPTION OF THE DRAWINGS

Page 5, after the "Fig. 3" description:

DESCRIPTION OF THE PREFERRED EMBODIMENTS

Page 9, eighth paragraph:

Furthermore, Fig. 3 shows an embodiment example in which clutch actuating ring 19 9 is also acted on translatably in its axial direction of movement opposite the action of the pressure by a counteracting force generator 20. In this case, the counteracting force generator 20 is formed by spring coils that act on the clutch side of clutch actuating ring 19 9 and endeavor to displace it in the direction of additional pressure chamber 6.

Page 10, first paragraph:

Obviously, as the volume of the piston/cylinder unit is increased by the displacement of the piston in the direction of external force generator 30 13, the operating fluid 11 exits additional pressure chamber 6 to the extent dictated by the displacement of piston/cylinder unit 7.
